

Digesting an egg

1. Label this diagram of the path food takes through the body, from the mouth to the anus.

2. An egg contains protein and some fats as well as vitamins and minerals. Write down where in the egg these different food groups are found (you may need to refer to www.crackingeggs.co.uk to help you) and where in the digestive system they are broken down and absorbed.

Protein _____

Fats _____

Vitamins _____

Minerals _____
